

WHAT IS CLAIMED IS:

1. A hand tool, comprising:

two half portions pivotally connected with each other; and

two opposite magnetic members each mounted in a respective one of

5 the two half portions;

wherein, the two opposite magnetic members are repulsive with each other, so that the two half portions are extended outward relative to each other by the repulsive action between the two opposite magnetic members.

2. The hand tool in accordance with claim 1, wherein each of the two
10 half portions has a side formed with a receiving space to receive the respective magnetic member, so that each of the two opposite magnetic members is entirely hidden in a respective one of the two half portions.

3. The hand tool in accordance with claim 2, wherein each of the two half portions has a first end formed with a jaw, a second end formed with a
15 handle, and a mediate portion formed with a pivot hole.

4. The hand tool in accordance with claim 3, wherein the receiving space is formed on the mediate portion of each of the two half portions.

5. The hand tool in accordance with claim 3, wherein the receiving space is located adjacent to the pivot hole of each of the two half portions.

20 6. The hand tool in accordance with claim 3, wherein the receiving space is located at a front end of the handle of each of the two half portions.

7. The hand tool in accordance with claim 2, wherein each of the two magnetic members is closely mounted in the receiving space of the respective half portion.
